KOPPERS® KOPPERS POLYSTYRENES

8X Typical heat distortion temperature 201°F; excellent electrical and mechanical properties. Ideal for radio cabinets and other applications where ambient temperatures vary.

7X Typical heat distortion temperature 194°F; superior molding qualities. Excellent general-purpose polystyrene.

3X Typical heat distortion temperature 180°F. Low cost and fine molding qualities make it good for general purpose uses where high heat resistance is unnecessary.

81, 71, 31 Externally lubricated forms of 8X, 7X and 3X. For use where mold release and ease of flow are of *critical* importance.

KOPPERS MODIFIED POLYSTYRENES

"High Impact" Polystyrenes have high resistance to shock, yet retain a major number of the desirable characteristics of regular polystyrenes.

MC-185 Best electrical resistance and lowest moisture absorption in the high impact series. Ideal for battery cases, electronics applications and in contact with high frequency parts.

MC-309 Combines ready moldability with high impact resistance and a high heat distortion temperature, 195°F. Containers, radio cabinets and television masks are typical of MC-309's applications.

MC-305 Physical, chemical and electrical properties are similar to those of regular polystyrene; heat distortion temperature is 175°F; adds easy moldability to high impact characteristics. Ideal for refrigerator parts, air conditioning housings, toys and novelties.

MC-301 Similar to MC-305 but has a higher heat distortion temperature (185°F); used where both high shock resistance and medium heat resistance are required.

"Medium Impact" Polystyrenes satisfy the need for thermoplastics with properties intermediate between regular polystyrene and the very highly shock resistant materials. They are characterized by the fine surface appearance of regular polystyrene but are much tougher.

MC-409 Must be molded at slightly higher temperatures than the other Medium Impact Polystyrenes; has high heat resistance (195°F); excellent resistance to heat deformation. Used in housewares, packages and containers and applications where moderate shock resistance and high heat resistance are required.

MC-405 has the easiest molding characteristics of the Medium Impact series. Typical heat distortion temperature is 175°F. Used for refrigerator parts, radio cabinets, television masks and parts where toughness is needed during assembly.

MC-401 has easy molding characteristics but with a higher heat distortion temperature than MC-405.

All Koppers Polystyrenes are available in a wide variety of transparent, translucent and opaque colors.

POUR-POINT DEPRESSANTS

Preps. blended with lubricating oils which impart to the latter the ability to flow freely in winter and at low temperatures. It is claimed that the use of such products eliminates the necessity of dewaxing, permits the maintainance of a high viscosity index which in turn means lower consumption, easier starting, and less wear; also maintains high natural resistance to oxidation.

PRE-SPOTTERS, DRY-CLEANING

Specialized soaps for removing stains which would be "set" by heat or not removed in the regular dry-cleaning operation. Stains most likely to become hard-set by heat may be grouped into three classifications: 1. Those which coagulate by heat, including many substances containing albumen such as blood, various foodstuffs, medicine, etc.; 2. Those which are oxidized by heat, including such substances as salad oil, cooking oil, and other unsaturated drying or semi-drying oils; 3. Those which become an integral part of the fibres when heated, including substances containing tannic acid, such as soft drinks, liquor, beer, some wines, fruit juices, grass and flower stains, tobacco, certain perfumes, coffee, tea, medicine, and photographic developing fluids.

SILICONE RELEASE AGENTS

Dow Corning Mold Release Agents are heat-stable, nonvolatile and resistant to oxidation. They are inert to metals and readily wet mold surfaces to form a parting film that improves plastic flow and prevents the sticking of rubber and plastics. Silicone release agents do not decompose at molding temperatures to form carbonaceous deposits in the mold.

Dow Corning Mold Release Fluid is generally applied from a solvent solution to obtain easy release of rubber and plastics. **Dow Corning Mold Release Emulsion No. 35 and 35B**, are diluted with water and applied by spraying. No. 35 Emulsion will break in contact with zinc or when mixed with hard water, however, No. 35B Emulsion remains stable stable in contact with even the hardest water. As release agents for butyl curing bags and for rubber tires, mechanical goods, soles and heels, floor tile and other molded rubber products, these silicone emulsions reduce scrap to a minimum; improve surface finish; reduce mold maintenance by as much as 90%.

Dow Corning 8 Emulsion was developed for use as a parting agent in the shell process for casting metals. Readily diluted with water, the emulsion can be applied to the pattern by spraying or dipping to form a silicone film that gives easy release and improves surface finish.

RESINS, COAL-TAR

Synthetics produced usually from crude coal-tar naphthas in the approx. B.R. of 150-200°C. The paracoumarone-paraindene resins are thermoplastic, range from a very faint yellow to darker shades; sold in flakes, chips, or liq. form. Coal-tar resins possess good resistance to alkalies and acids; used as a binder in floor tile, in rubber compounding, in varnish formulation, in adhesives, rubber cements, mixed with other synth. resins for special purposes.

RESINS, POLYSTYRENE

Colorless liq. boiling at 146°C and having a dens. of 0.925. Ethyl benzene is the raw material. Is readily converted into solid polystyrene by heating with or without catalysts. Physical properties can be made to vary widely by the conditions under which polymerization is conducted. Uses—in electrical work because of its dielectric properties; as a true thermoplastic; as a hardening and adhesive promoting agent for waxes; as a base for low varnishes and lacquers. Highly resistant to water, alcohol, most acids and bases. Softening point of approx. 90°C. Dens. 1.054. Readily molded at temperatures between 145 and 160°C.

RESINS, SYNTHETIC

"Complex substantially amorp. organic semi-solid or solid materials (usually a mixture of substances) built up by chemical reaction of comparatively simple compounds, and, depending upon the temperature at which the examination is made, approximating the natural resins in various physical properties; namely lustre, fracture comparative brittleness, insolubility in water, fusibility or plasticity when heated or exposed to heat and pressure and, at a certain more or less narrow temperature range before fusion, a degree of rubber-like extensibility; but commonly deviating widely from natural resins in chemical constitution and behavior with reagents." SILICONE RESINS

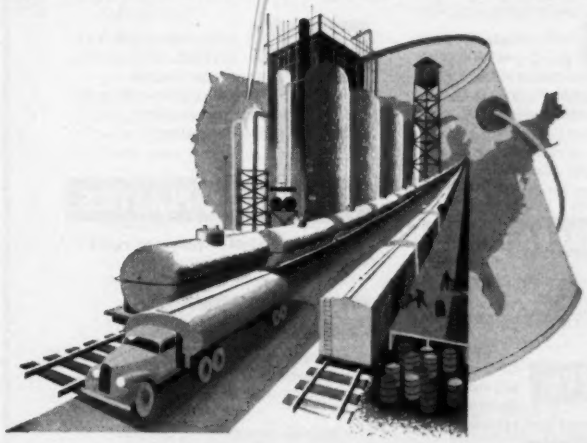
PROTECTIVE COATINGS formulated with Dow Corning 802, 803, 804 and 805 Silicone Resins are used to protect ovens, stacks and other metal surfaces exposed to high heat and weathering. Such coatings withstand continuous exposure to temperatures of 500°F and upward; do not lose gloss, chalk or yellow on aging; possess exceptional resistance to moisture, oxidation and chemical fumes. Modified Silicone Resins are used to formulate protective coatings and may also be cold blended with organic paint vehicles to improve moisture resistance and gloss and color retention.



LAMINATING RESINS, Dow Corning 2103, 2104 and 2105, are thermosetting resins used to bond inorganic fabrics in the production of rigid electrical laminates. 2103 Resin is also used to bond finely divided particles such as powdered metals and mica. Properties of a typical 1/8" glass laminate bonded with 2103 include flexural strength of 20,000 to 40,000 psi; dielectric strength with continuous filament cloth of 250 volts/mil or more. Dow Corning 2104 is an excellent bonding agent for laminating at pressures of 30 psi or less. Typical continuous filament glass laminates have flexural strengths of 25,000 to 35,000 psi at 25°C, 12,000 to 15,000 at 250°C; dielectric strength, 400 volts/mil. Laminates made with Dow Corning 2105 have a dielectric strength greater than 180 volts/mil after 5,000 hours at 250°C, or about 100 times the life of the best laminates previously available.

Silicone electrical insulating resins and varnishes are described in SILICONE DIELECTRIC ad in Dielectrics section of this guide.

GE silicone RUBBER

G-E silicone rubber combines the flexible properties of organic rubber with the temperature resistance and inertness of inorganic materials. Serviceable from −120 to 600 F. Inert to metals, many chemicals, weather, ozone and arcing.

Primary uses: Ducting, gaskets, boots, bellows, belting, tapes, and grommets.

Many Grades Available

G-E silicone gums—several types for compounding silicone rubber stocks.

SE-100—for coating glass cloth and glass-served wire; encapsulating coils.

SE-360—low-compression-set grade for best "come-back" at high temperatures.

SE-550—extreme low-temperature grade for *flexibility* at −120 F.

SE-450—improved-strength grade for optimum physical properties.

SE-460—improved-strength grade for extrusion on wire and cable.

SE-972—general-purpose grade for extrusion on wire; low water absorption.

For more information about G-E silicone rubber, write to General Electric Company, Section 355-4H, Waterford, N. Y.

GENERAL ELECTRIC

SILASTIC*
THE DOW CORNING
SILICONE RUBBER

Silastic is a semi-inorganic rubber that stays flexible and resilient at temperatures from −100° to +500°F. It shows excellent resistance to oxidation and outdoor weathering, to a variety of chemicals and hot oils, to ozone and ultraviolet rays, and to compression set at high temperatures. It is waterproof and water repellent, and has good electrical insulating properties.

Over 20 different Silastic stocks are available for molding, extruding, laminating and calendering. Solvent free Silastic pastes are produced in various consistencies for coating, laminating, calking and sealing, or for embedding electrical coils.

Fabrication methods are very similar to those used in forming conventional rubbers, although oven curing is required to develop optimum properties in finished parts. Silastic parts are now produced by over 70 of the most able rubber fabricators. Typical applications include heat and oil resistant gaskets, seals and diaphragms, mechanical parts, laminates, sponged Silastic parts, Silastic insulated lead wire and cable, spark plug boots and electrical insulating tapes.

CARBOSE*

(Sodium Carboxymethylcellulose)

Wyandotte Carbose is designed specifically for detergent applications and a wide variety of other industrial uses requiring a low viscosity, rapidly soluble material.

In addition to its use in conjunction with soaps and synthetic detergents to effect a marked increase in carbon soil removal and whiteness retention on cottons, Carbose is extremely useful for improving the bursting strength of test liner as well as for giving various types of paper and paper board a superior finish which is resistant to penetration by inks and grease.

Carbose is of value as a warp size and finishing material in the textile industry.

Other applications include its use as a protective colloid, as an emulsifying agent and as an adhesive binder.

MONSANTO
SANTOBRITE*

(Sodium Pentachlorophenate Technical)

Standard Forms: Powder; 1-oz. briquettes; pellets.

Characteristics: Light-tan color; nonvolatile; comparatively odorless; stable under ordinary atmospheric conditions when stored in a dry place. Soluble in various organic polar solvents. Stable, relatively unreactive; but partial conversion to insoluble pentachlorophenol occurs at pH's below 6.8, and insoluble salts are formed by reaction with ions of copper, lead, mercury, zinc, iron and calcium. Noncorrosive to metals. Available as substantially neutral material containing from 0.5 to 0.9% free alkali.

General Information: A water-soluble industrial preservative, fungicide, algaecide, and herbicide. Used for manufacture of termite-resistant cellulose insulating board and for control of microbiological activity in paper, paperboard, leather, adhesives, latex and cold-water paints; for control of sap stain in green lumber; for control of slime and algae in water systems where the water is not used for drinking or bathing; and in the manufacture of herbicide formulations.

PENTA

(Santophen* 20, Monsanto's Pentachlorophenol Technical)

Characteristics: Dark-grayish flakes; chlorophenolic odor; crystallizing point 174.0° C. min. Stable; relatively nonhygroscopic; insoluble in water but soluble in most organic solvents, fats, waxes, resins and asphalts. Boiling point is 293° C. at 760 m.m. Relatively inert chemically, but reacts with strong alkalis to form water-soluble salts.

General Information: A water-insoluble industrial preservative and herbicide. Used as an insect- and decay-control agent for wood, cellulosic products, textiles, and as an active ingredient in herbicide formulations.

Application Information: Wood-preservative formulations of Santophen 20—Penta—can be applied by any of the accepted methods—pressure, soak, dip, brush or spray.

NAXONATE . . . A Wyandotte Hydrotrope

Sodium Xylenesulfonate, marketed under the name of Wyandotte Naxonate, has the unusual property of increasing the solubility of a great variety of organic chemicals in water. Naxonate is useful for attaining and maintaining the homogeneity of scouring and sizing compositions, printing pastes and spotting agents. It is finding application in solvent extractions and in speeding up chemical reactions in aqueous solutions.

SOFTENERS, TEXTILE

Compounds which impart a softness of handle or feel to finished textiles. Previously, oils, such as castor and olive were used and still are to some extent, but in recent years many compounds and chemicals of a complex nature have been introduced. Many softeners are prepared by condensing oleic and stearic acids with ethylene diamine and its alkyl derivatives. o-Phenylene diamine can be substituted for ethylene diamine. Another class includes the thioethers made by reacting saturated or unsaturated monomeric aliphatic compounds or hydroaromatic compounds which contain a mercapto group, with 1:2-propylene oxides, which are substituted in the methyl group by a halogen, or hydroxy, or a mercapto radical.

SOFTENERS, WATER

Substances used to remove sol. compounds of lime and magnesia present in natural waters and which form scale and sludge when used in boilers. Soft water is also essential in numerous industrial operations for the sol. lime and magnesium salts react with other chemicals employed to form undesirable compounds which interfere adversely with operations and processes. The four outstanding processes used for softening water are: distillation, the cold lime-soda process, the hot lime-soda process, and the zeolite process. SOLVENTS, COAL-TAR

Coal-tar solvents are generally aromatic hydrocarbons of the benzene series, but other compounds obtained from coal-tar, as those of the phenol series and nitrogen bases, such as pyridine, have special solvent properties that make them useful for a wide variety of purposes. Ordinarily the constituent compounds are those contained in coal-tar light oil obtained both from scrubbing coal gas or by the distillation of coal-tar produced by the high temp. carbonization of bituminous coal. They are supplied to meet required specifications as to boiling range, color, flash point, etc. See also Naphthas, Benzol, Toluol, Xylol, etc.

SOLVENTS, ETHYL CELLULOSE

Ethylcellulose films of max. tensile strength and elongation are obtained from alcohol-hydrocarbon solvents formulated in such a way that the last solvent to evaporate from the film consists almost entirely of hydrocarbon. If the evaporation rates of the alcohol and of the hydrocarbon are approx. equal, the solvent mixture producing the lowest viscosity also produces the best films. The hydrocarbons that can be used alone with alcohols are aromatic hydrocarbons, hydrogenated naphthas, or high solvency naphthas. Naphthas from paraffin crudes give the best results when used with a small proportion of aromatic hydrocarbon. Solvents consisting of hydrocarbons and aliphatic ketones or esters have higher viscosities than those produced by the use of alcohols, but large amounts of ketones or esters can be used without lowering the film properties. Kauppi and Bast, Industrial & Engineering Chemistry, Vol. 30. No. 1, p. 74.

SOLVENTS, METAL DEGREASING

Various coal-tar and petroleum solvents have long been used by the manufacturers of small metal parts for degreasing before finishing. Within the past few years vapor-phase degreasing has been introduced in larger units, requiring solvents with low-boiling points, low fire and health hazards. Most often used are low-boiling chlorinated solvents, such as trichlorethylene, ethylene dichloride, carbon tetrachloride, or mixtures of these of other products.

SOURS, LAUNDRY

Compounds employed to neutralize the alkali which the water used for rinsing may contain. Good practice does not countenance the use of sours for neutralizing laundry sodas, soap, or bleach, except such traces as cannot be removed by thorough rinsing. Acetic and oxalic acids are used, but in recent years, specially compounded products, usually containing sodium silicofluoride, have been offered whose action is less harsh and more easily controlled.

SULFADIAZINE (2-Sulfanilamidopyrimidine)

M.W. 250.27. White elongated prisms or crystalline powd. Sulfadiazine is sol. 0.0123 g. in 100 cc. water at 37°C. It is readily sol. in aqueous bases or mineral acids; sl. sol. in alcohol or acetone, insol. in ether or chloroform. M.P. between 253°-256° C with decomp. when inserted in a bath at 245°C and heated at 4°C per minute. It may be assayed by diazotization. Is useful in all the diseases treated by previous sulfanilamide derivatives, especially diseases caused by B-hemolytic streptococci, staphylococci, pneumococci, meningococci, gonococci and B. coli. It has the advantage of much lower toxicity than other drugs of comparable potency; hence may be used at more effective blood levels. Its solution in triethanolamine has shown outstanding properties in treatment of severe burns.

How to get the right surface-active agents:

Chem-men have found that surface-active agents which are good in one application may not be so good in another. That's because these products are made for specific uses: as detergents, wetters, emulsifiers, softeners, etc. MICHELENE is the trade name for a full line of surface-active agents, sulfonation bases, and textile chemical specialties. Chances are that among the over three dozen MICHELENE agents there's one that can do your job. MICHELENE products range from flaked and powdered general-purpose detergents to such items as dye-fixatives and resin finishes. For recommendations for your particular use, write to *M. Michel and Company, Inc., 90 Broad Street, New York 4, N.Y.* Or phone DIgby 4-3878. Basic suppliers to chemical manufacturers for over a quarter century, their trade name for a full line of surface-active agents is

Monsanto TEAP

(Triethylammonium Phosphate—40% solution in proprietary solvent)

● Monsanto TEAP reduces corrosion of steel containers by nonaqueous solutions, thus cutting packaging costs and improving shelf-keeping properties. Added to liquids, prior to packaging in tin or terne plated steel containers, in amounts from 0.5 to 1.0% on the weight of the liquid, TEAP forms an inert phosphate coating on the inside surface of the metal container. SUGGESTED APPLICATIONS: Alcohol solutions of natural resins; alcohol solutions of shellac substitutes; hydraulic fluids (alcohol-mineral oil type); shellac varnish; starting fuels; de-icing fluids; lacquers; chlorinated aromatics; gasket cements; wash primer thinners.

VITAMIN B_2

$C_{17}H_{20}N_4O_6$. M.W. 376.36. Orange-yellow, crystalline product, melting at 280-290°C (with decomp.). It is only sl. sol. in water (0.0025 gram in 100 cc), the solution exhibiting an intense yellow-green fluorescence. Readily sol. in caustic soda solution, alcohol, cyclohexanol, and amyl acetate. Insol. in ether, chloroform, acetone, and benzol. The pure crystalline vitamin is sensitive to light, but it is stable in the dark even at high temp. It is also stable toward most oxidizing agents but can be reversibly reduced. A deficiency of this vitamin has an effect on growth and leads to skin lesions of various types. Riboflavin is generally used medicinally but is an essential ingredient of the new enriched flour.

silicone
WATER REPELLENTS
for masonry

G.E.'s sodium methyl siliconate (SC-50) is a water solution containing 20% silicone which air-dries to provide superior weather and moisture protection for masonry and structural materials.

Water-soluble SC-50 can be applied from water solution or incorporated in integral mixes of cement paint, gypsum and concrete. It can be applied to damp surfaces. Non-inflammable, it eliminates the solvent hazard.

G.E.'s SR-53, a solvent solution containing 10% silicone, is a fast-drying masonry water repellent. It provides a transparent, highly water-repellent coating to practically all types of masonry. SR-53 does not seal the pores, permits masonry to "breathe."

For more information, write to General Electric Company, Section 355-6H, Waterford, New York.

GENERAL ELECTRIC

SILICONE
WATER REPELLENTS

Dow Corning Silicones, the most durably water repellent materials available, are used to treat insulator bodies, medicinal vials, leather, paper, masonry and textiles. Others show promise as soil stabilizers.

Dow Corning 200 Fluids applied to glass and ceramics provide a silicone surface which maintains its water repellency at temperatures 100°C above the limits of a waxed surface. Insulator bodies treated with these fluids have a high surface resistivity and low power factor. Drugs and medicines flow freely without waste from silicone treated vials.

DeCetex Textile Finishes give an excellent hand and a water repellent surface that has exceptional durability to both dry cleaning and laundering. They also impart stain and crease resistance, longer life and improved sewability. Such finishes contain no corrosive chemicals; have no residual odor; and can be applied from an aqueous emulsion with conventional finishing equipment.

Dow Corning 1109 water repellent for leather footwear, gloves, sporting and mechanical goods minimizes water absorption and transmission and improves resistance to chemicals and oils without changing the "breathing" characteristics of leather.

Silicone Masonry Water Repellents keep brick, concrete block and other above-grade masonry walls dry in the rain; reduces discoloration and efflorescence without changing texture or porosity.

WAX, PETROLEUM

Obtained as by-product from the distillation of paraffin base petroleum. Outstanding characteristic is the resistance to the passage of moisture vapor. Uses—in candlemaking, as impregnating and coating material for paper and cardboard. Low fire hazard, stability and high glosses which are obtainable with their use are certain other important characteristics. Various grades include scale wax, semi-refined wax, fully refined wax, the plastic or amorp. waxes, such as ceresine, ozokerite, etc., which while not made from petroleum in the usual sense, nevertheless are hydrocarbon waxes of mineral origin and hence can be placed in the same category as the petroleum waxes. The petrolatums are also amorp. waxes and should be included in this general grouping.

WAXES, VEGETABLE

General term denoting natural waxes of vegetable origin: See Wax, Carnauba; Wax, Candelila; Wax, Japan; Wax, Bayberry. Other waxes in this group include—Fibre Wax, Cotton Wax, Flax Wax, Sugar Cane Wax, Tea Wax, Rose Wax, etc. Vegetable waxes are very complex chemically and herefore difficult to define their properties. In the group are usually the hardest waxes. Carnauba is exrtemely hard, insol. in water, but can be obtained in an aqueous state by boling with alkalies and emulsifying agents. Widely used in polishes of many various types. Candelilla is very hard but somewhat brittle. Japan more closely resembles the animal tallows in composition and finds wide usage in laundry finishing, leather dressing, etc. Bayberry closely resembles Japan in its composition.

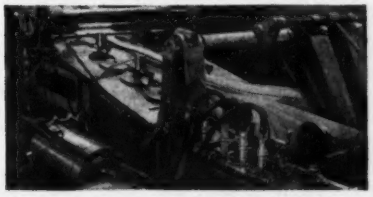
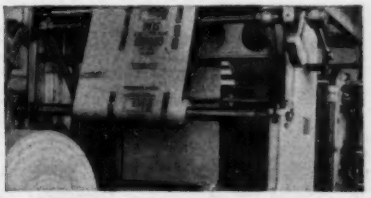
9 reasons why it pays to make HUDSON one of your major suppliers of Multiwall Sacks



1. Hudson—a reliable source of supply. Already world's largest maker of household paper napkins, and of gummed sealing tape, this multimillion dollar corporation has now become an important supplier of multiwall sacks, with a fully integrated new Kraft mill.

2. Uniform high quality. Because Hudson owns its own timber, and all manufacturing operations are under one management, variations are avoided in quality of the finished sack.



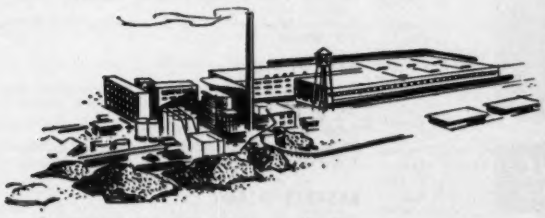
3. One laboratory control. Sack quality is protected—because every step from tree to sack is under unified inspection and control.

4. Finest equipment for finest sacks. Hudson equipment is modern and new. Production delays from breakdown are unknown here.

5. Eye-appealing sacks. Hudson offers a complete packaging design service, to make your sacks the ideal medium to attract buyers.

6. Full color printing. Hudson offers superb 4-color printing for your sacks, with special Hudson rub-resistant, odorless inks.

7. Production control. Every step from logging to sack-making goes by schedule, so all orders can be shipped on the day promised.



8. Assured delivery. Served by rail, truck or water. Your shipment leaves on time, for there are no transportation bottlenecks.

9. World's fullest guarantee. Only Hudson gives a Replacement Guarantee against sack breakage on your filling or closing machines.

From this huge new Hudson Kraft mill, Hudson Multiwall Sacks are available pasted or sewn—valve or open mouth styles.

For Highest, Efficient
DUST RECOVERY

MIKRO-COLLECTOR 48 filter-cylinders of felt (A) and traveling reverse-jet ring (B).

MIKRO-COLLECTOR comprising 4 felt filter cylinders.

The unique principles employed in the MIKRO-COLLECTOR* insure optimum dust recovery (up to 99.999%) and phenomenal filter rates.

Its superior wool felt filter medium permits the easy handling of damp or dry, light or heavy dust-loaded air streams. With the Hersey traveling reverse-jet principle uniform filter resistance is maintained, thus assuring uniform air flow.

Used in the handling and recovery of a wide range of dusts and powders, the MIKRO-COLLECTOR eliminates atmospheric pollution, and provides full recovery of valuable products. Dangerous or noxious dusts and minute size dust particles are easily handled. Installations for the handling of ultra-fine radioactive dusts during the past year have a combined capacity of more than 125,000 cfm.

The MIKRO-COLLECTOR is manufactured with single and multiple filter cylinders of varying diameters and lengths to meet every requirement.

MERCOID

OFFERS A LINE OF DEPENDABLE CONTROLS FOR VARIOUS INDUSTRIAL REQUIREMENTS

THE ONLY 100% MERCURY SWITCH EQUIPPED CONTROLS THEY ASSURE ACCURACY, BETTER PERFORMANCE AND LONGER CONTROL LIFE

Wherever the control of temperature, pressure, liquid level or mechanical operations are involved, Mercoid Controls and Switches assure a maximum in efficient and dependable performance.

PRESSURE CONTROLS

Available for numerous industrial applications. They are equipped with Bourdon tubes and have outside double adjustments which eliminate guesswork when setting controls. Indicators show the operating range on the calibrated dial.

REMOTE STEM TEMPERATURE CONTROLS

For control of liquids or gases, such as air, oil, water, paraffin, glue or distillate vapors and many other industrial applications. A heavy gauge Bourdon tube is employed which is actuated by the expansion of volatile liquid within the remote bulb. The control is equipped with convenient outside double adjustments.

LEVER ARM AND FLOAT CONTROLS

Mercoid lever arm controls have a variety of applications where it is desired to mechanically open and close electric circuits Mercoid float controls are used for maintaining fluid levels in tanks or for control of sump pumps or cellar drainers.

LINE VOLTAGE THERMOSTAT

The No. 855 thermostat is used for line voltage applications where it is desired to handle the full motor load directly without the use of a relay. Available with "on-off" manual switch for unit heater applications. These thermostats are used for both heating and refrigeration applications.

TRANSFORMER-RELAYS

Type V is a reliable low voltage mercury contact relay which also acts as a transformer inducing low voltage (24 volts) on the pilot circuit. There is no hum or chatter. Used for all types of automatic equipment. Available in various voltages, cycles and circuits.

MERCURY SWITCHES

Mercoid brand switches are noted for their superior operating qualities. Various types available.

MERCOID CONTROLS are available in a variety of types for sensitive control of Pressure, Temperature and Lever actuation.

BS&B CLIMAX CONTROLS

. . . are built like a fine precision watch!

Nowhere more than in the chemical industries are precision controls more vital to the process . . . or to the safety of the plant and personnel. BS&B Climax Controls are designed and engineered by men thoroughly familiar with your industry . . . and manufactured by one of the oldest and best-known companies in the business. More than 12,000 parts, all manufactured to very exacting tolerances like those of a fine precision watch, are required in the making of our full line of more than 200 different types of controls. That's why so many companies have come to rely on Climax for precision control of pressures, temperatures, levels and flow.

There are 78 Climax Control Centers . . . where you can call on BS&B for *confidential* Climax Engineering Service. A Climax Engineer will help you work out your control problems and applications. Write for your copy of the Climax Controls Catalog. No obligation.

DORRCO
D-I SYSTEMS

The most important single unit in an ion-exchange system is the exchanger cell. The wide variation in the character and composition of solutions encountered in the chemical industries . . . the frequently complex flowsheet . . . require that special attention be given to cell design. Long experience in a wide variety of processes has proved the efficiency of the Dorrco D-I exchanger cell.

Hackney

2-PIECE

ACID DRUMS

Hackney Acid Drums are deep drawn . . . pressed from two sheets of steel. That means no longitudinal or chime seams . . . just one circumferential weld located between and protected by two I-bar rolling hoops. That's why the interiors are smooth, free of cracks and crevices. Heavy forged spuds, attached by a two-pass weld, minimize bung failures. Reinforced chime protectors add strength and life. Heat treating increases finished drum's resistance to corrosion.

Shippers of acids and alkalies everywhere find that Hackney 2-piece acid drums effectively reduce costs . . . last longer. Write for complete information.

BUFLOVAK Vacuum Double Drum Dryers safely dry a wide range of heat-sensitive materials at protective low temperatures.

BUFLOVAK
DRUM DRYERS

DRUM DRYING is an economical and continuous method for producing dry materials at low operating cost, directly from liquids containing solids in solution or suspension. This modern process is applicable to a wide variety of materials, including chemicals, dyes, pharmaceuticals and food products. It offers the added advantage of controlling, within certain limitations, the physical characteristics, appearance and texture of the dry product, demanded by market or process requirements.

The process of drum drying consists of applying the liquid material to a revolving heated drum, where the moisture is quickly evaporated, during a partial revolution of the drum. Then the dry material is removed by a stationary knife. This basic operating principle is used with various modifications on all types of BUFLOVAK drum dryers. New developments and refinements, that are exclusive and patented BUFLOVAK features, bring the economies and advantages of drum drying to a constantly growing list of products.

To meet successfully these widely differing requirements, BUFLOVAK Dryers are built for vacuum and atmospheric operation; in single, double drum, twin drum and multiple stage types. The standard sizes meet practically all capacity requirements.

EVACTOR

STEAM JET VACUUM PUMPS

Croll-Reynolds Steam Jet Evactors are made in single, two, three, four, and five stage units for any vacuum up to a few microns absolute. More than 10,000 installations are serving all types of condensers and chemical processing units. There are no moving parts which means extreme simplicity and dependability. Constant research and development by an organization which has specialized on this equipment for over thirty-five years has also provided exceptional efficiency.

CHILLED WATER FOR PROCESS COOLING

Croll-Reynolds Chill-Vactor equipment uses the Evactors described above to chill water and aqueous solutions by evaporative cooling. The total capacity of Chill-Vactors installed to date is equal to over 32,000 tons of ice per day. This equipment is furnishing chilled water for air conditioning, chilled liquors for chemical process work and for chilling porous solids and wetted surfaces.

BUFLOVAK EVAPORATORS

FOR THE RECOVERY OF SOLIDS . . .
BUFLOVAK Vertical Rapid Concentration Evaporators are simple in design and construction and provide maximum recovery of solids. A high rate of evaporation per square foot of heating surface results from improved heat transfer, accomplished by proper steam distribution, correct velocity of steam and thorough removal of non-condensable gases and condensate.

FOR CHEMICAL PROCESSES . . .
BUFLOVAK Evaporators are designed and built for every chemical process requiring evaporation. They offer operating economies and efficient, dependable, long-life performance. They can be built of any material of construction suited to the particular application.

FOR SOLVENT RECOVERY . . .
In the manufacture of medicinal and drug extracts and in the extraction of active principles from vegetables or animal products, a dilute solution is obtained which requires concentration under conditions of maximum solvent recovery and minimum entrainment loss. BUFLOVAK provides these advantages in evaporators designed for economical construction in stainless steel, aluminum, nickel, etc.

FOR FOOD PRODUCTS . . .
BUFLOVAK Evaporators of stainless steel profitably meet the exacting requirements of producing concentrated food products of high quality. They are built in sizes and types to meet every operating condition, including multiple effects and save 50% and upward in steam and cooling water.

FOR LOW-TEMPERATURE OPERATION . . .
BUFLOVAK Low-Temperature Evaporators can be furnished to operate as low as 58° F. to safely concentrate delicate food and chemical products. Automatic controls simplify operation, reduce labor to a minimum, and give uniform results even to the density of the product.

Tel. LOngacre 3-4930 Cable Address: "PERMUTIT"

HEADQUARTERS FOR ION EXCHANGERS AND EQUIPMENT FOR OVER 40 YEARS

Only Permutit offers undivided responsibility for the manufacture and performance of both Ion Exchange materials and Equipment . . . the *complete* plant needed for best results.

• PERMUTIT ION EXCHANGERS — Rigid quality control gives you a reliable product that equals or exceeds ratings. Permutit ion exchangers are manufactured only after extensive research. Before being offered for sale, they must pass thorough laboratory and field tests to prove their superior qualities.

• ION EXCHANGE EQUIPMENT — Correct design of ion exchange equipment is just as essential as the selection of proper ion exchangers. All Permutit equipment is designed for economy of operation and a minimum of maintenance. Special attention is given to corrosion-resistant construction, good hydraulic design, efficient regeneration and rinsing with minimal exchanger attrition. Automatic controls save labor and chemicals, give uniform results, eliminate the possibility of errors.

• APPLICATION INFORMATION — Our research files contain data on all types of applications. Your inquiry will be carefully studied by experienced specialists whose recommendations will save you valuable time in planning process improvements. Write us, outlining your problem — or call our nearest industrial sales office.

If your problem is FEEDING

CONSTANT-WEIGHT FEEDERS

regulate the feeding of materials at a constant-weight rate, rather than a constant-volume rate. The feeder automatically compensates for changes in specific gravity and bulking, due to moisture, which would cause irregular feeding.

Hardinge also builds disc feeders, weight-indicating feeders, and non-flooding volumetric feeders. Write for Bulletin 33-D-36 covering entire feeder line.

If your problem is

FILTERING

investigate the

AUTOMATIC BACKWASH RAPID SAND FILTER

Here is a sand filter which cleans itself—automatically—with no interruption whatever to the filtering operation. No shut-down or change-over is necessary while cleaning is in progress.

The secret lies in its special, compartmented filter bed and traveling backwash mechanism which automatically cleans one compartment at a time.

And . . . it's highly efficient, removing 75% to 80% of the suspended solids—90% or better if chemicals are added.

May be used for plant supply water or for waste water treating. Write for Bulletin 46-36.

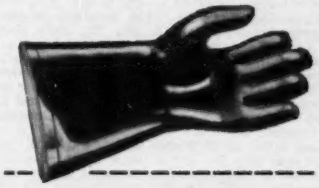
40% to 70% cost-saving with Edmont work gloves



job-fitted to your needs

NEOX (reinforced neoprene) coated gloves fit widest range of work

Never before a glove so equally resistant to abrasion, cutting, oil, acids, solvents, caustics, degreasants and heat. Good flexibility and grip. All Edmont coatings are bonded to strong fabric linings for comfort and snag-resistance. Full coated or palm coated.

"Redmont" NEOX gloves for heaviest duty service and safe grip

Non-slip finish, cured *into* 30% thicker red NEOX coating, grips wet or greasy surfaces as well as dry. Longest wearing, safest of all liquid-proof gloves. Seamless wearing surface, extra wide thumb span, curved fingers.

Safety engineers approve white-fabric lined, rubber-coated Grab-its

Tough, flexible, rough-textured natural rubber, bonded to sturdy white fabric lining, gives positive non-slip grip, wet or dry. Outwear ordinary canvas gloves up to 10 times. Far safer, too.

Grapplers grip even in grease; outwear other plastics 50%

Coated with DUROX, a leather-like reinforced plastic that retains its grip when wet, is extremely resistant to abrasion, oil and coolants, and stays flexible. Perfect fitting, too. Note wing thumb and curved, pre-flexed fingers.

Hand-fitting Monkey Grips far outwear leather, ordinary plastics

Special Edmont vinyl coating is second only to "DUROX" in wearing qualities and grip. Same wing thumb and pre-flexed finger design as "Grappler" gloves; fit the hand *all over.*

Make this FREE TEST to cut your costs, improve safety. Send us a brief description (on business letterhead) of your operations, materials handled, and temperature condition. Without cost we will recommend the best glove for the condition and forward samples for testing on the job.

BUFLOVAK
PROCESSING KETTLES

BUFLOVAK Processing Kettles are engineered and built to perform a number of basic operations; such as, heating, cooling, mixing, extracting, reacting, distilling, evaporating, drying and solvent recovery. Many operations can be progressively performed in the same unit; thereby speeding production, lowering investment cost, and increasing profits. Vacuum, atmospheric or pressure types can be provided.

Greater unit capacity . . . increase in heat transfer . . . substantial savings in power . . . thorough mixing . . . and the complete discharge of the processed batches . . . are other profit-building benefits from exclusive BUFLOVAK features.

Available in many types, materials of construction, and sizes to meet specific requirements.

The BUFLOVAK Research and Testing Laboratory is equipped to process a small quantity of material to determine the type equipment and accessories that will give the most efficient results.

ACME
FULL-VISION
GAS MASKS

Greater vision, minimized fogging, reduced breathing resistance, less "huff and puff", greater comfort, greater audibility. One face piece adaptable for chin-style, chest-style, or hose-mask connection.

Exclusive Features

Acme masks protect against smokes, fumes, organic vapors, acid gases, carbon monoxide, ammonia, radio active dusts, and other hazards. Extra large lenses provide maximum vision. Dead air check valve limits carbon dioxide rebreathed. Write for complete data on masks and canisters.

PROTECT-A-VALVE *for Sub-Zero Use*

This auxiliary valve protects Acme No. 6 masks against the problem of frozen valves. Also protects against curled valves due to rubber solvents. Functions in temperatures as low as —50° F.

PULVERIZERS

For Precise Particle Control and Perfect Blending

Whether it be for granular, fine or ultra-fine grinding, there's a MIKRO-PULVERIZER or a MIKRO-ATOMIZER engineered to the measure of your requirements. These sturdy machines, built for rugged service, are designed to widen the processing profit margin, through higher production at lower cost.

THE MIKRO-PULVERIZER—a dustless Pulverizer for dry or liquid milling, granulating, fine grinding and blending—no fans, cyclones or separators. Recent developments make it even more efficient in handling of heat-sensitive materials.

THE MIKRO-ATOMIZER—a mechanical screenless Pulverizer with built-in air separator, for the efficient production of ultra-fine powders from 1 to 25 micron and at remarkably low grinding temperatures.

Refer to "DUST COLLECTORS" for information on our MIKRO-COLLECTOR, designed for highest, efficient dust recovery.

WATEROUS PUMPS

Flow settings on a WATEROUS Pump stay constant. Internal clearances are fixed . . . there is no metal to metal contact between rotors and housing. There is no aeration . . . no contamination of product. From start to stop, output volume stays the same.

Easy to take down and easy to clean, WATEROUS Pumps handle thin, viscous or semi-solid materials with equal ease.

Waterous DEPENDABLE PUMPS SINCE 1886

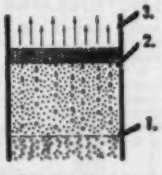
CLEAN SEPARATION— *between vapor and liquid*

when

YORKMESH Demisters

are installed in:



VACUUM TOWERS
DISTILLATION EQUIPMENT
GAS ABSORBERS
SCRUBBERS
SEPARATORS
EVAPORATORS
KNOCK-OUT DRUMS, ETC.

YORKMESH Demisters (entrainment separators—mist eliminators) have proved to be the answer to higher production and improved products when installed in new or existing equipment.

YORKMESH Demisters (made of finely woven wire) remove substantially all liquid entrainment even at increased vapor velocities. The net result: More production with higher quality.

How YORKMESH Demisters work:

1. Vapor disengaging from liquid creates fine liquid droplets.
2. The liquid droplets impinge and coalesce into large drops and fall off.
3. The vapor is now dry, entirely freed from entrained liquid.

Materials: Types 430, 304, 316 Stainless Steel, Monel, Carbon Steel, etc. Prompt shipment.

EVACTOR

STEAM JET VACUUM PUMPS

Croll-Reynolds Steam Jet Evactors are made in single, two, three, four, and five stage units for any vacuum up to a few microns absolute. More than 10,000 installations are serving all types of condensers and chemical processing units. There are no moving parts which means extreme simplicity and dependability. Constant research and development by an organization which has specialized on this equipment for over thirty-five years has also provided exceptional efficiency.

CHILLED WATER FOR PROCESS COOLING

Croll-Reynolds Chill-Vactor equipment uses the Evactors described above to chill water and aqueous solutions by evaporative cooling. The total capacity of Chill-Vactors installed to date is equal to over 32,000 tons of ice per day. This equipment is furnishing chilled water for air conditioning, chilled liquors for chemical process work and for chilling porous solids and wetted surfaces.
